# Centron's Eagle Ridge Wins Top Award

Centron Residential Corporation's Eagle Ridge project won the top award at the Precast Concrete Institute of North America's 46th Annual Design Awards October 7, 2008 in Orlando, Florida.

The Harry H. Edwards Industry Advancement Award was presented to representatives from Centron Residential Corporation and the design team, Gibbs Gage Architects, Cassian Dyck Associates, TRL & Associates and Lafarge Precast.

This is a very prestigious award in the precast concrete and construction industry. The project beat out numerous other applicants from all over North America and took the top award of 34 awards handed out at the awards banquet which was the focal point of the annual precast concrete conference.

Judges were impressed by the overall quality and innovative uses of precast concrete to overcome a number of project challenges in the design and construction of the concrete condominium buildings.

Congratulations to all involved in this continuing success story. Everybody, including the purchasers of these units, should be very proud.
